

78. Jahrestagung der Deutschen Geophysikalischen Gesellschaft (DGG)

The International Joint Master "Physics of the Earth" at the University of Vienna (Austria) and Comenius University Bratislava (Slovakia)

Bokelmann, G., Meurers, B., Moczo, P., Ondrášková, A.

The Joint Master study "Physics of the Earth" is a two-year programme offered by the major universities of Austria and Slovakia: University of Vienna and Comenius University in Bratislava. It focuses on the physics background for Physics of the Earth, in particular seismic wave propagation and data analysis, based on a profound education in Physics and Mathematics. Students learn to apply quantitative methods, how to observe and mathematically describe phenomena occurring in the physical environment and advance their analytical thinking.

Quantitatively-oriented Bachelor studies in Physics or Geophysics prepare for the Master, and allow entering the programme.
